Residential & commercial air conditioning & air heating solutions

Stay Cool, Stay Warm and Stay Green:
Discover the Future of Energy-Efficient
Air Conditioning

■ About Us

Warmington is an honest, friendly, and reliable local air conditioning and air heating installation, servicing and repair expert. We are proud to support our local community in Coventry and Warwickshire.

When you come to us with your cooling and heating needs, you can expect individual attention and personalised services.

- ✓ **Installation**
- ✓ **Maintenance**
- ✓ **Breakdown**

■ We are F-Gas registered

Any business that carries out the installation or servicing of refrigeration, air-conditioning or heat pump equipment that contains, or is designed to prevent, F-Gas refrigerants, then by law, must obtain an F-Gas company certificate.

■ Residential

Worcester Bosch air conditioning & heating units are designed to be as quiet and unobtrusive as possible, so it's easy to forget they're even there. They were built with two operating modes: heating and cooling.

This means that on a warm summer evening, you'll get the perfect night's sleep thanks to the comfortable, cool air of Worcester Bosch air conditioning. Their heating mode also means you can use them all year round by switching to heat, perfect for those winter months.

■ Commercial

Installing comfortable cooling/ heating systems is their bottom line, as research shows that productivity can be increased by as much as 20% due to increased concentration, health and general well-being of employees.

People perform less effectively and less efficiently in extreme temperatures. When temperatures are too low, concentration levels fall. We can offer a complete service to help you decide on the best air conditioning system for your requirements.

■ How does air conditioning work?

Air conditioning units work by removing the warm air from inside your home and pumping it outside while releasing the cool air back into the room, reducing the temperature.

When the liquid becomes gas, it absorbs heat; in principle, this is how it functions.

■ Our Services

01

Installation - Cool off in the summer, or warm up when it's chilly, with air conditioning that keeps you comfortable, whatever the weather outside. With a Worcester Bosch home air conditioning unit, you'll breathe easier too - with cleaner, filtered, circulated air, whenever you need it.

02

Maintenance - Regular maintenance of air conditioning units is crucial for their efficiency and longevity. Over time, dust and debris can hinder performance and affect air quality. Routine checks involve cleaning filters, inspecting coils, and ensuring drain channels are clear.

03

Breakdown - Breakdowns in air conditioning units can stem from wear and tear, poor maintenance, or factory defects, leading to issues like refrigerant leaks or electrical failures. When a unit exhibits signs of trouble, it's crucial to consult a professional quickly. Timely intervention can prevent extensive damage, prolong the unit's life, and maintain indoor comfort.

The benefits

There are several benefits to having a new air conditioning system installed; whether your air conditioning unit is placed in a commercial or domestic setting, here are just some reasons why you should have a unit installed:

Numerous health benefits and cleaner air

Air conditioning ventilates and circulates throughout your home, drawing fresh air from the outdoors and filtering the air indoors.

Warm up or cool down

Air conditioning and heating can maintain a pleasant environment, whether summer or winter, without you having to do anything.

Ease of use

The controls for your unit are designed to be simply to operate and making adjustments to temperature is just one click away.

Control your allergies

With built-in air filters, our air conditioning units remove almost all the dust, smoke, pollen and other allergens so that you can breathe easier.

"Energy efficiency rating of A++ for cooling and A+ for heating."

A+++ → D

FAQ's

Opposite is some standard frequently asked questions with answers. Should you have any further, please call us on 024 7667 7225.

What is the advantage of choosing an energy-efficient air conditioning & air heating unit?

The primary advantage is that these units use less energy, reducing your carbon footprint and saving you money on your energy bills. Additionally, you can benefit from 0% VAT on the installation of your new energy-efficient unit.

What guarantee is available?

You can get up to a 5-year guarantee on your new energy efficient air conditioning unit

Are you F-GAS registered?

Yes, and by choosing F-GAS registered engineers, you are ensuring that the individuals installing and maintaining your unit are fully qualified and compliant with the latest industry and environmental standards.

Are you accredited?

Yes, we are a Worcester Bosch accredited installer that can offer a range of exclusive benefits including extending guarantees and finance options.

Do they make lots of noise?

We know that a good night's sleep is the reason that many homeowners install air conditioning, so we have also made sure that our systems are as quiet as possible too.

■ New Boiler

In addition to our air conditioning services, we also offer a range of other heating solutions for your home or business.

We understand the importance of having a properly functioning heating system that keeps you warm and ensures energy efficiency. That's why we offer benchmark boiler installation services to our clients in Cheshire, Wirral and North Wales.

Apart from energy efficiency, a new boiler installation can also enhance the overall performance of your heating system. You'll experience improved heating and hot water output, ensuring maximum comfort throughout the year.

■ Servicing

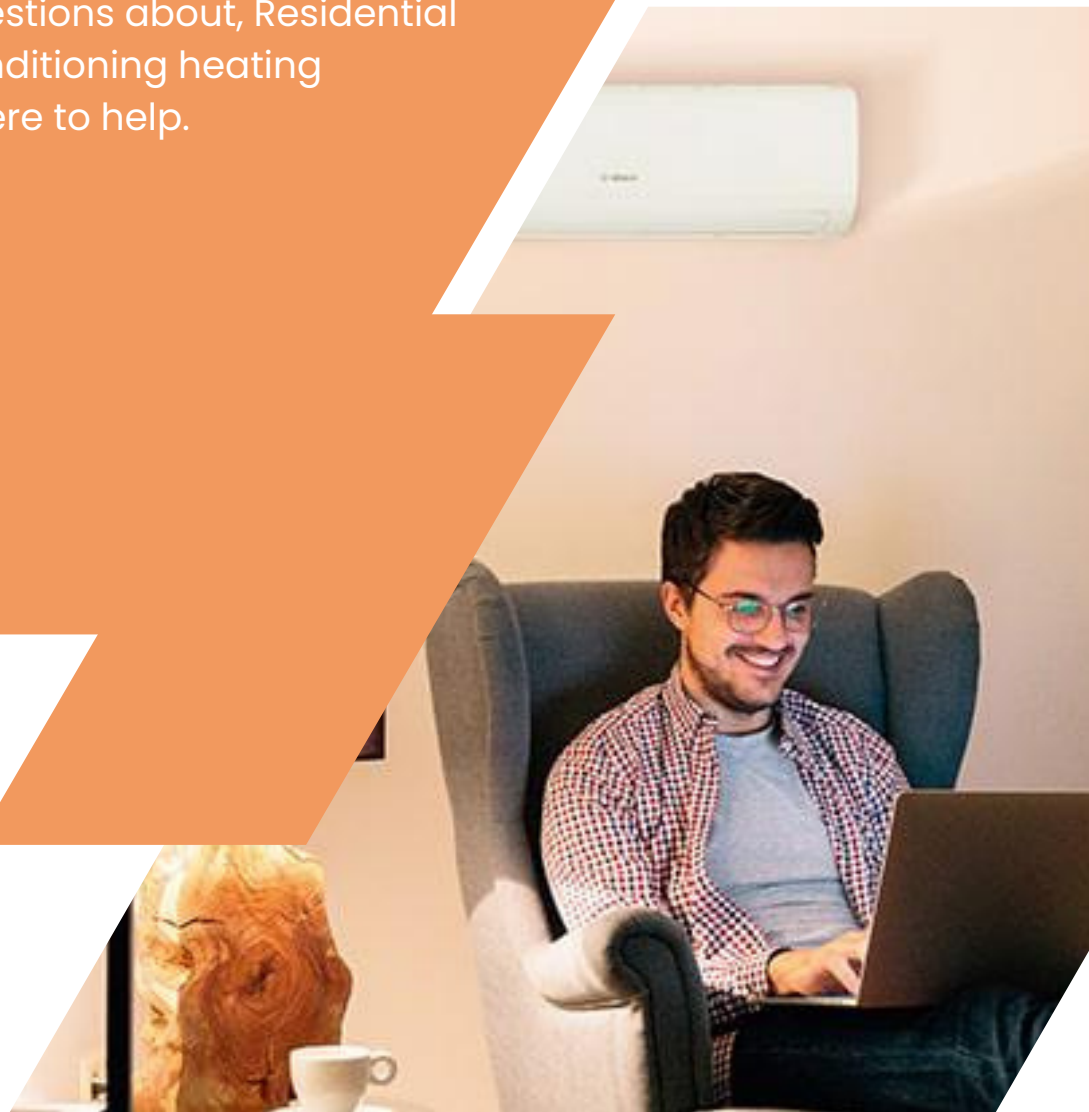

A boiler service is essential for keeping a home's boiler running efficiently. It can help reduce energy costs, improve safety, and extend the boiler's life. In addition, regular servicing can ensure that the boiler is running at its highest efficiency and can therefore reduce energy costs.

A boiler service will also help identify potential safety issues, such as carbon monoxide leaks, which can be addressed before they become a more severe problem. Furthermore, regular servicing can help extend the boiler's life, as it will help identify any issues before they become more serious.
